# COVID-19 GLOBAL OVERVIEW - OBJECTIVES

## OBJECTIVES

To analyze the spread and severity of COVID-19 across countries

Evaluate the total number of confirmed cases, deaths, and recoveries to understand how severely each country was impacted by the pandemic.

To measure the recovery and death rates among affected countries

Compare the *Recovery Rate (%)* and *Death Rate (%)* to assess healthcare effectiveness and patient outcomes in different WHO regions.

To identify countries with the highest active case burden

Analyze the *Active Rate (%)* and total *Active cases* to highlight where the virus remained most persistent during the period.

To examine weekly growth trends in confirmed cases

Study the *1 week change* and *weekly increase (%)* columns to identify countries experiencing rising or slowing infection rates.

To evaluate overall COVID-19 mortality and recovery balance globally

Use the *Mortality Ratio* and *Recovered / 100 Cases* indicators to assess the balance between fatality and recovery trends at a global level.

# COVID-19 Global Overview Report – Summary

This report presents a country-wise analysis of COVID-19 data, highlighting confirmed, active, recovered, and death cases across WHO regions. It tracks weekly changes, growth rates, and key health indicators such as recovery and mortality rates.

The dashboard helps users compare the pandemic's impact globally and regionally, offering insights into trends, response effectiveness, and current status of affected countries.

THANKYOU!
